PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building scalable web applications across frontend and backend systems. Delivered performance improvements, improved system reliability, and contributed to production-grade applications in fintech and AI-driven platforms. Strong in JavaScript ecosystems with a focus on building efficient APIs, optimizing performance, and collaborating across cross-functional teams in fast-paced environments.

EXPERIENCE

Software Developer

Sept 2024 - June 2025, Remote

Das Gehirn Inc

- Reengineered legacy systems into a modular service-oriented architecture, reducing code complexity and improving maintainability across multiple services
- Designed and implemented backend services handling data processing and API delivery, improving response consistency and system reliability
- Standardized data flow across services, reducing data inconsistencies and improving system stability under load
- Collaborated with cross-functional teams to resolve migration bottlenecks, ensuring on-time delivery of system upgrades
- Adapted quickly to evolving system requirements during migration phases, maintaining performance and minimizing downtime

Frontend Engineer (Backend Collaboration Focus)

Oct 2023 – Dec 2023, Remote

Acepacific Bank

- Built responsive user interfaces for fintech applications, improving usability and clarity of complex financial data
- Integrated frontend systems with secure backend APIs, ensuring accurate and reliable data representation for end users
- Implemented state-driven data flows that improved consistency between frontend and backend services
- Collaborated with backend and product teams to deliver features aligned with financial system requirements
- Maintained high data integrity standards while working with sensitive financial and transactional data

Software Engineer (Intern)

Apr 2023 - June 2023, Remote

Guidient

- Migrated application architecture to Next.js, improving page load performance and SEO, leading to faster user interactions
- Optimized frontend performance across devices, improving responsiveness and scalability for growing user traffic

TECHNICAL SKILLS

Languages: Typescript, JavaScript, Python, HTML5/CSS3/SASS

Frontend: React.js, Next.js, Vue.js, Material UI, Tailwind CSS, Ant Design

Backend & APIs: Node.js, Express.js, RESTful APIs

State Management: Redux, Context Api

Databases: MongoDB, PostgreSQL

Methodologies: Agile/Scrum, CI/CD pipelines

Tools: Git, GitHub, VS Code

Others: Mapbox, Responsive Design, Ant Design Principles, il8n

Notable Projects

DALL·E 2.0 Clone (MERN Stack)

- Built backend services to process user requests and deliver generated outputs via RESTful APIs
- Designed API endpoints with strong validation and error handling, improving reliability and traceability
- Implemented asynchronous workflows to handle concurrent image generation requests efficiently
- Structured backend architecture to support scalability under increasing user demand

YelpCamp (Node.js, Express, MongoDB)

- Developed full backend system supporting authentication, CRUD operations, and user-generated content
- Designed database schemas and API endpoints for location-based services using Mapbox integration
- Improved data consistency and application structure by applying backend best practices
- Implemented secure authentication flows and session management

CERTIFICATION & EDUCATION

AltSchool Africa, Lagos, Nigeria

Diploma, Software Engineering

Nnamdi Azikiwe University

BSc. Computer Science
